

**Project Design Phase-II**  
**Solution Requirements (Functional & Non-functional)**

|                      |                                                |
|----------------------|------------------------------------------------|
| <b>Date</b>          | 03 October 2026                                |
| <b>Team ID</b>       | 6ab4d8aca238dc999eb5c33f                       |
| <b>Project Name</b>  | Import Data using Transform Maps (Spreadsheet) |
| <b>Maximum Marks</b> | 4 Marks                                        |

**Functional Requirements:**

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)                                                                                                                                                                          |
|--------|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| FR-1   | Table Creation                | Create Employee Training Records table (u_employee_training_records)<br>Add fields: Training Name, Completion Date, Status, Employee (reference to sys_user)<br>Add Status choices (In Progress, Completed) |
| FR-2   | Data Import                   | Prepare spreadsheet with four fields<br>Load data through System Import Sets > Load Data<br>Create import set table u_employee_training                                                                     |
| FR-3   | Field Mapping (Transform Map) | Create Transform Map from import set to target table<br>Map source fields to target fields<br>Run Transform to load data                                                                                    |
| FR-4   | Employee Department Linking   | Dot-walk Employee to Department in form layout<br>Show Department in form and list view                                                                                                                     |
| FR-5   | Roles & User Management       | Create backup user and HR Manager role<br>Assign role to user<br>Add role to application menu and module                                                                                                    |
| FR-6   | Access Control (ACL)          | Elevate role to security_admin<br>Create Read ACL and Write ACL with HR Manager role<br>Test access by impersonating users                                                                                  |

**Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

| NFR No. | Non-Functional Requirement | Description                                                                                                                |
|---------|----------------------------|----------------------------------------------------------------------------------------------------------------------------|
| NFR-1   | Usability                  | Simple form and list views; fields and choices are easy to select; Department auto-displayed from the Employee.            |
| NFR-2   | Security                   | Role-based access with Read and Write ACLs; only HR Manager role can view/edit records; other users cannot see the table.  |
| NFR-3   | Reliability                | Import and transform run with logged results (state Complete, success code); data mapped accurately to the correct fields. |
| NFR-4   | Performance                | Spreadsheet rows are loaded and transformed in bulk; records open quickly in list view.                                    |
| NFR-5   | Availability               | Hosted on ServiceNow cloud instance, accessible through a browser at any time.                                             |
| NFR-6   | Scalability                | More records, users and roles can be added using the same staging table, transform map and ACL setup.                      |
