

# Customer Journey Map

Import Data using Transform Maps  
(Spreadsheet)

Team ID: 6ab4d8aca238dc999eb5c33f

Date: 03 October 2026

Scenario: Importing, linking and securing employee training records in ServiceNow (Administrator / HR Manager)

|                                                                                     | <b>Entice</b><br>How does someone initially become aware of this process?                        | <b>Enter</b><br>What do people experience as they begin the process?                           | <b>Engage</b><br>In the core moments in the process, what happens?                                                       | <b>Exit</b><br>What do people typically experience as the process finishes?    | <b>Extend</b><br>What happens after the experience is over?                   |
|-------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
|                                                                                     | <b>Need identified</b> – Employee training data must be stored in one place                      | <b>Create table</b> – Employee Training Records table with 4 columns                           | <b>Map fields</b> – Create Transform Map and run Transform                                                               | <b>Impersonate</b> – Log in as HR Manager and as another user                  | <b>Records ready</b> – Data available in list view for reporting              |
| <b>Steps</b><br>What does the person typically experience?                          | <b>Prepare spreadsheet</b> – Excel / Google Sheets file with 4 fields                            | <b>Load data</b> – Upload the file through System Import Sets                                  | <b>Dot-walk</b> – Show Employee Department on the form<br><br><b>Secure data</b> – Create user, HR Manager role and ACLs | <b>View records</b> – Check read and edit access                               | <b>Reuse</b> – Same setup reused for new files and users                      |
| <b>Interactions</b><br>What interactions do they have at each step?                 | <b>Things</b> – Spreadsheet (Google Sheets / Excel)<br><br><b>Places</b> – ServiceNow login page | <b>Things</b> – Tables, System Import Sets, Load Data<br><br><b>Places</b> – ServiceNow web UI | <b>Things</b> – Transform Maps, Form Layout, Users, Roles, ACL screens                                                   | <b>Things</b> – Impersonate User menu, Employee Training Records list and form | <b>Things</b> – List view, application menu<br><br><b>People</b> – HR Manager |
| <b>Goals &amp; motivations</b><br>Help me... / Help me avoid...                     | Help me keep training records organised in one place                                             | Help me load data without typing each record                                                   | Help me link each record to an employee and department<br><br>Help me restrict who can see the data                      | Help me confirm only the right people have access                              | Help me report training status easily                                         |
| <b>Positive moments</b><br>What steps are enjoyable, productive or exciting?        | Data is already available in a spreadsheet                                                       | Import completes with a success message                                                        | Department appears automatically in the record                                                                           | HR Manager can see and edit records; others cannot see the table               | Secure, reusable setup                                                        |
| <b>Negative moments</b><br>What steps are frustrating, confusing or time-consuming? | Spreadsheet may have missing or wrong data                                                       | Field names must match the table                                                               | Many steps: transform map, roles and ACL                                                                                 | Access issue if a role or ACL is missed                                        | Manual upload needed for every new file                                       |
| <b>Areas of opportunity</b><br>How might we make each step better?                  | Validate the spreadsheet before upload                                                           | Provide a ready spreadsheet template                                                           | Automate with scheduled imports                                                                                          | Add test cases for each role                                                   | Create dashboards for training status                                         |
