

Project Design Phase Solution Architecture

Date	03 October 2026
Team ID	6ab4d8aca238dc999eb5c33f
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Solution Architecture Diagram:

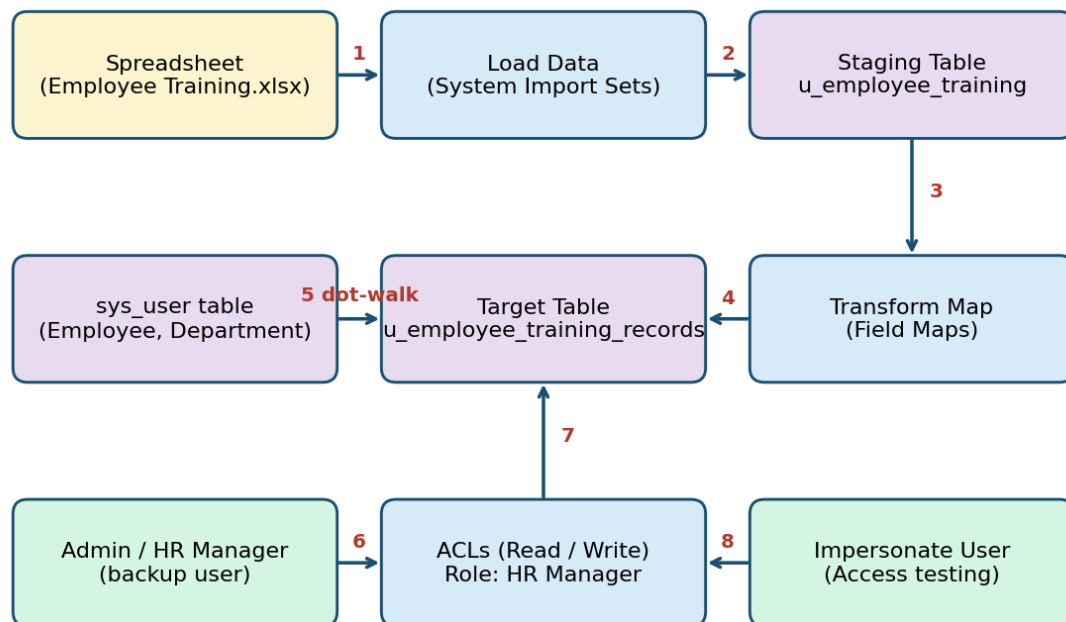

Figure 1: Architecture and data flow of importing spreadsheet data into ServiceNow using Transform Maps and securing it with ACLs

Flow: (1) Spreadsheet is uploaded through Load Data, (2) rows are stored in the staging table, (3) the Transform Map applies the field maps, (4) data is written to the target table, (5) Employee Department is pulled from sys_user by dot-walking, (6)(7) the HR Manager role passes the ACL check for the target table, (8) access is verified by impersonating users.
