

Project Design Phase

Problem – Solution Fit Template

Date	03 October 2026
Team ID	6ab4d8aca238dc999eb5c33f
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

1. CUSTOMER SEGMENT(S) [CS]	6. CUSTOMER CONSTRAINTS [CC]	5. AVAILABLE SOLUTIONS [AS]
HR managers and administrators of organisations that use ServiceNow and keep employee training records in spreadsheets.	Manual entry of many records is time-consuming. Employee data must be visible only to authorised users. Spreadsheet data must match the table fields.	Typing each record manually in ServiceNow; maintaining separate Excel sheets. Pros: simple. Cons: error-prone, no link to employee / department, no access control.
2. JOBS-TO-BE-DONE / PROBLEMS [J&P]	9. PROBLEM ROOT CAUSE [RC]	7. BEHAVIOUR [BE]
Load training records quickly into ServiceNow. Link each record to an employee and show department for reporting. Allow only authorised users to view and edit records.	Training data is stored in spreadsheets outside ServiceNow, not related to employee (sys_user) records, and has no role-based protection.	Prepare a spreadsheet with four fields, upload it through Load Data, map fields with a Transform Map, check the records and test access by impersonation.
3. TRIGGERS [TR]	10. YOUR SOLUTION [SL]	8.1 ONLINE [CH]

Training data needs to be consolidated for HR reports or review.
A new training spreadsheet is received.
Need to protect employee information.

4. EMOTIONS: BEFORE / AFTER [EM]

Before: frustrated, unsure about data errors and data exposure.
After: confident, in control and secure.

Import the spreadsheet into ServiceNow through Load Data and a Transform Map into the Employee Training Records table.

Link each record to the employee and dot-walk the Department field for reporting.

Protect the table with an HR Manager role and Read / Write ACLs, and verify access by impersonating users.

ServiceNow web UI: Load Data, Transform Maps, Form Layout, Roles and ACLs.

Google Sheets / Excel to prepare the data.

8.2 OFFLINE [CH]

Discussing data and access needs with the HR team.

Collecting training completion details from employees.
